(Detailed contact omitted for privacy. Available upon request.)

Skills

Areas: Data Science, Machine Learning, Statistical Inference, Signal Processing
Computing: Python, Matlab, BASH, Condor, SQL, C/C++, Java, Vim, LaTeX
Languages: English (*full professional proficiency*), Mandarin Chinese (*native*)

Education

California Institute of Technology (Caltech), Pasadena, CA *Sept 2016 – Present*
Ph.D. candidate in Physics (GPA: 4.1/4.0); Advisor: Prof. Alan J. Weinstein

- Graduate research assistant at the LIGO Laboratory at Caltech
- Minor: Computational Science and Engineering
- Relevant coursework: Learning Systems; Machine Learning and Data Mining; Bayesian Statistics and Data Analysis; Computational Cameras
- Master of Science in Physics, June 2020

University of Virginia (UVA), Charlottesville, VA *Aug 2011 – May 2015*
B.A. with High Distinction, Astronomy-Physics; B.A., Mathematics (GPA: 3.8/4.0)

- Senior Theses: (1) Probing the Orbital Lifetime and Stability in Kepler Multi-planet Extrasolar Systems; (2) The Occurrence of Compact Groups of Galaxies through Cosmic Time (*Journal Ref: ApJ (2019) 873 124*)
- Honors: UVA Echols Scholar; Member of National Physics Honor Society – Sigma Pi Sigma; 2015 UVA International Studies Office Award for Academic Excellence; 2014 UVA Outstanding Undergraduate Physics Research Award; 2013 – 2014 and 2014 – 2015 UVA Physics Department Mitchell Scholarship

Université Joseph Fourier, Grenoble, France *Jun – Jul 2012*
Summer, Bachelor Summer Program – Physics Large Scale Facilities

PhD Research Highlights

- Implemented a real-time Kalman filter for optimal thermo-optical aberration estimates in the Thermal Compensation System of the LIGO Livingston detector
- Improved the calibration of suspension cavity lengths of the LIGO Livingston detector
- Performed a range of measurements to characterize the LIGO Livingston detector for commissioning towards LIGO Observing Run 3
- Developing novel improvements for streamline detection pipeline PyCBC and operating the pipeline to detect gravitational waves (GWs) from compact binary coalescences
- Characterizing exceptional compact binary coalescence events during observing runs
- Developing the Bayesian inference module Bilby for GW science
- Developing a rapid GW waveform generation model Roman with deep learning
- Mentored three Caltech LIGO SURF students in summer, 2019
- *The Nobel Prize in Physics in 2017* was awarded to three LIGO founders: Rainer Weiss (MIT), Kip S. Thorne (Caltech), Barry C. Barish (Caltech)

Past Research Highlights

Experimental High Energy Physics with the CMS Detector at the LHC, Physik-Institut der Universität Zürich, Zürich, Switzerland
Research Assistant *Sept 2015 – Jun 2016*

- Analyzed trigger efficiencies of the CMS Higgs searches using Monte Carlo simulations for the upgraded LHC running at 13 TeV
- *The 2013 Nobel Prize in Physics* was awarded to Francois Englert and Peter Higgs after the discovery of the Higgs Boson at the LHC at CERN

The Occurrence of Compact Groups of Galaxies through Cosmic Time, UVA Department of Astronomy, Charlottesville, VA
Undergraduate Research Assistant *Jan – May 2015*

- Studied the population of "compact groups of galaxies" and the population of galaxies within compact groups at different epochs in the evolution of the universe using the Millennium Simulation

Searching for Gravitational Waves from the Coalescence of High-mass Black Hole Binaries, LIGO Laboratory at Caltech, Pasadena, CA
Summer Undergraduate Research Fellow (SURF) *Jun – Sept 2014*

- Developed data analysis pipeline software in search for gravitational waves produced in the coalescence of binary black holes
- Included the population of spinning black holes in the analysis pipeline for Advanced LIGO, improved upon previous non-spinning searches in Initial LIGO
- Expanded the search parameter space and analyzed simulations to evaluate the pipeline search sensitivity
- Performed detailed timing analysis of the pipeline for future optimization work regarding sensitivity and timeliness

NASA-UVA JefferSat Cosmic Ray Mission, UVA Department of Mechanical and Aerospace Engineering, Charlottesville, VA
Science Investigator *Aug 2013 – May 2014*

- Adapted the existing JefferSat CubeSat balloon satellite design to accommodate one spectrometer for cosmic ray measurements at ∼124,000 feet in the atmosphere
- Integrated onboard power system, thermal insulation system, and navigation system within the payload structural and high-altitude environmental limitations
- Designed and implemented both the ground and the payload data handling and communication hardware and software
- Measurements were used to validate and improve the NASA NAIRAS model for predicting commercial flight crew and passenger exposure to cosmic radiation

Identification of Upward-going Muons for an Indirect Dark Matter Search in the NOνA Experiment, Fermilab, Batavia, IL
Undergraduate Research Assistant *Mar 2013 – Jan 2014*

- Searched for energetic neutrinos originating from dark matter annihilation at the solar core using the NOνA Far Detector at Fermilab
- Designed and implemented an algorithm to reconstruct muon tracks and separate muon signals from cosmic rays efficiently
- Generated and ran simulations to evaluate the sensitivity of the search algorithm
- Performed electronics testing and liquid scintillator leak testing and helped assembly of the NOνA Near Detector
